

A Digital Form Management System

(A KTP project between CAIR and Trackyou Ltd.)

Dr. Wei Guo

This talk will describe the process of developing a digital form management system, used to digitalise paper work forms currently used in industries. The system provides mobile data collecting, sending, storing, and rendering functions, by employing mobile computing, GPS, and wireless communication technologies.

The talk will cover:

- Background and motivation of the project
- User requirements and vision on the product
- System conception and design
- Implementation, technologies and theories involved
- Alternative approaches
- Latest progress and demo

The talk will be aided by demonstration of key devices
